Sound Sampler

Documentation SoundSampler version 6.0

*Suitable for Windows **

Automute function: Windows Media Player, Winamp, Itunes and Virtual DJ.

website: breakdancedeen.nl

Description.

SoundSampler is a sound software application which was once created to play fairground sounds for various miniature fairgrounds, the software is free to download and available to everyone. The software was created by pure hobby and fairground hobby and has no commercial purposes, even though we know it can be used for commercial purposes. Voluntary amounts for further developments or wishes can be found on our website, where we also try to provide support as best we can.

Security.

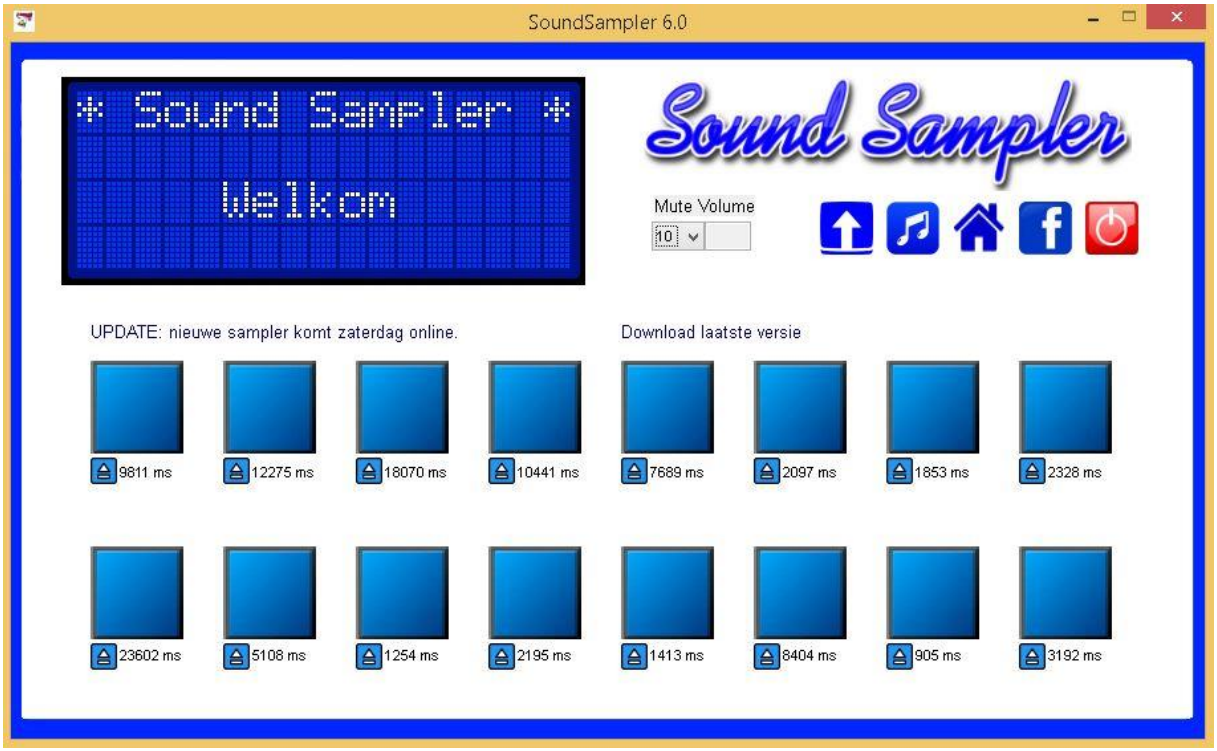
Because we are not recognized programmers with an official license certificate, it is possible that a security message appears when downloading or using the SoundSampler 6.0. Experienced users know that the software is safe. Version 6.0 includes a so-called update process, which comes with a notification as soon as there is a new software version.

How does it work.

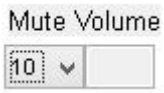
Start the SoundSampler and play music via Windows Mediaplayer, Winamp, Itunes or Virtual DJ. Click on one of the buttons and a carnival jingle will be played, the automute function ensures that the music is automatically muted and comes back when the jingle has finished playing. With the Mute volume button you can set whether the music is muted entirely or whether light can still be heard through the jingle.

With the select button below the buttons you can select your own jingle, spot or sound effect, in our Sampler Media Library you can download many effects and jingles for free. Supporting file type are wav & mp3.

In detail.



Where are the keys stand for



Mute Volume: With this you can set whether the music is completely muted while playing a jingle, or if you want to leave it audible in percentage.

Upload Button: Upload button makes it possible to share or forward samples to have samples edited

Download Button: Connect to our Sample Media Library and download jingles, sound effects or other fun tunes

Home Button: Need support/support? Connect to our website

Facebook Button: Connect to SoundSampler on Facebook

Exit Button: Stop SoundSampler

Push Button: Play the desired sound that is selected for the relevant button

Selectie Button: with this you select your own samples or sound effect.

Nieuws Update: Indicates when news or updates are available

Push Buttons and keys.

You can click on the Push buttons but you can also use the keys on your keyboard, these are the buttons on the right side of your keyboard, the NumPads mentioned. You can also use separate Numpads, both wired and wireless.

Make youre own samplebox.

Over the years there have been many hobbyists who have made their own sound box in combination with SoundSampler. Below a small explanation to make this yourself

Take an old USB keyboard. This keyboard has a small print, check which key (especially the numpaths) on which pin it is connected on the print. A bit of a job, but once selected, these are fun projects to build.
